# The infrasound installation in Sardinia

- Sosenattos mine: a place similar to the destination site for the telescope
- Aim of the project: characterization of the infrasound field in the mine
- Infrasound are one of the components of the Newtonian noise

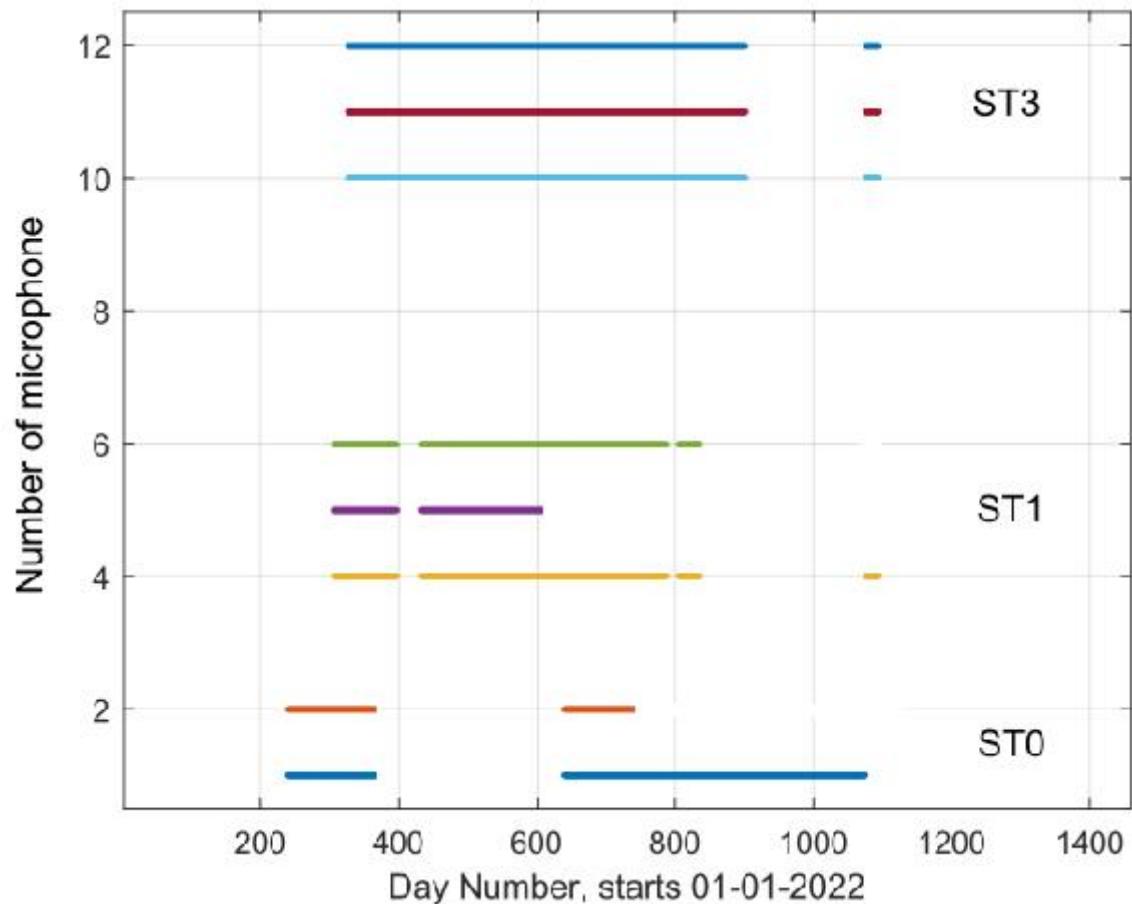

Setup:

- Multipoint infrasound measurements,  
(8 microphones placed)
- Two types of infrasound sensors  
(infrasound microphones):
  - GRAS 47AC 1/2"
  - Astrocent microphones

# Data from Sardinia

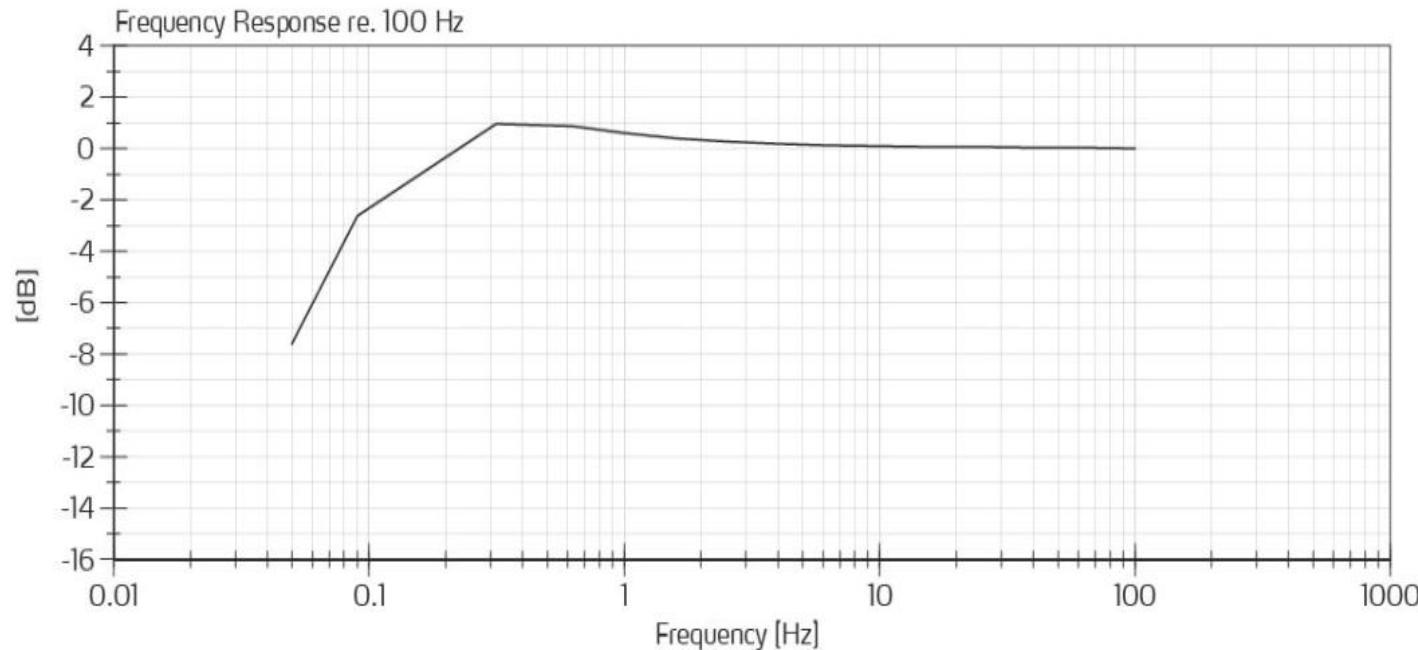

- More than 2 years of data (since 21st Nov. 2022 till now 12th Dec 2024)
  - Data stored at public:  
[https://intra.astrocent.camk.edu.pl/sos\\_enattos/](https://intra.astrocent.camk.edu.pl/sos_enattos/)
  - Data miniseed format
  - ST0: 1608 days of data 2x microphones (804 per mic.)
  - ST1: 1540 days of data 3 microphones (513 per mic.)
  - ST3: 1812 days of data 3 microphones (604 per mic.)
- data till 19.02.2025

# GRAS 47AC 1/2" CCP Infra-Sound Microphone Set

Condenser microphone set for infra-sound measurements in open acoustic fields

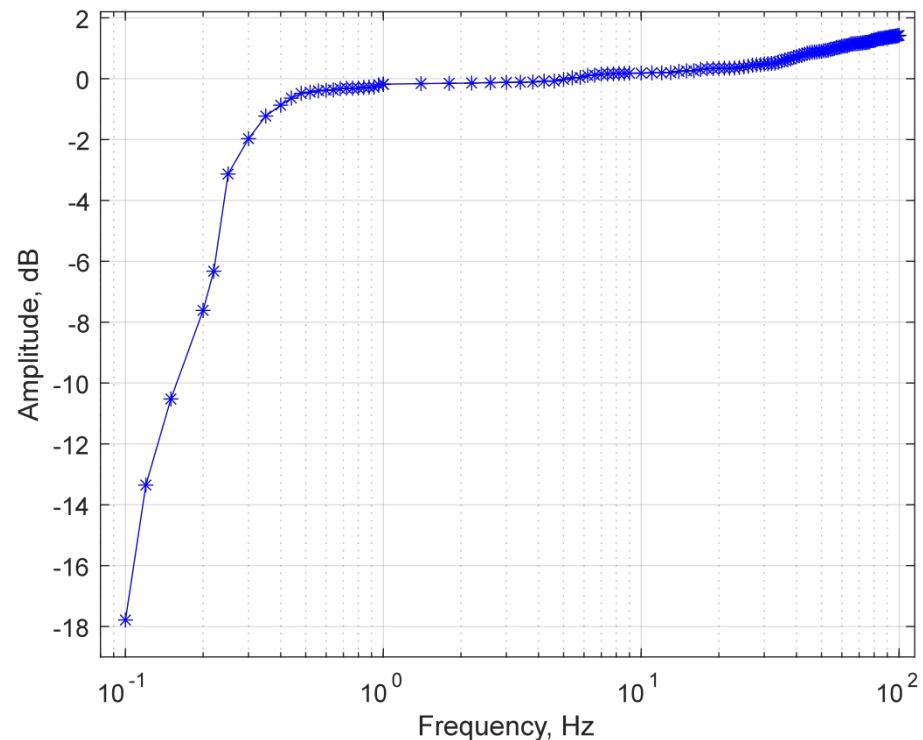

- frequency range: **0.09 Hz** to 10 kHz
- dynamic range: 20 dB(A) to 148 dB
- sensitivity: **8 mV/Pa**

<https://www.grasacoustics.com/products/special-microphone/infra-sound-microphones/product/712-47ac>

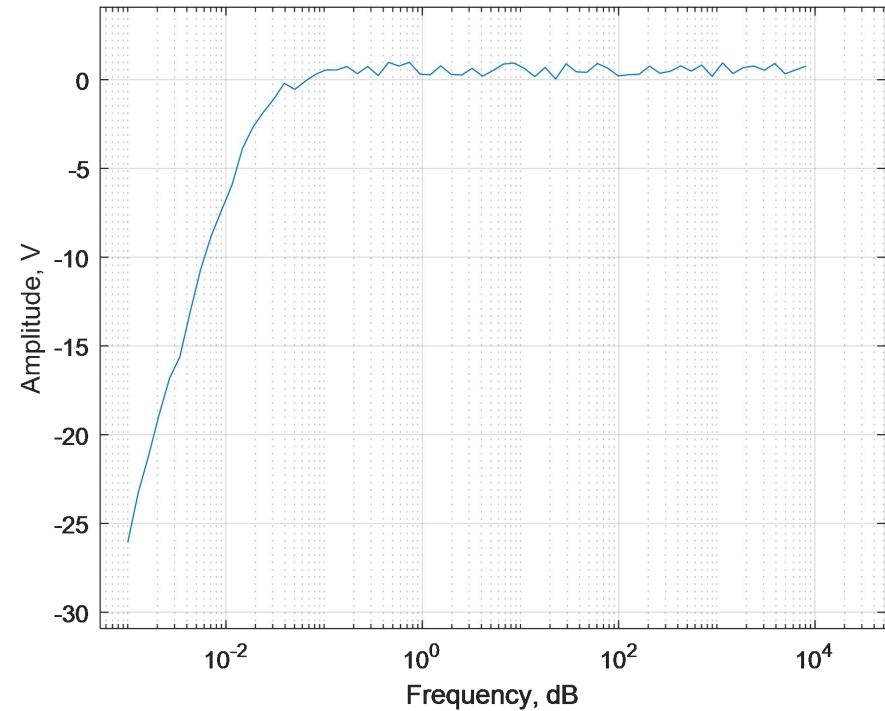

# Infrasound microphones - Astrocent

- Developed by the Astrocent team
- Low-cost infrasound microphone ~100 EU
- Frequency range from **0.1 Hz** to 120 Hz (AC47 Gras from 0.09 Hz to 20 kHz)
- Sensitivity: **2.5 mV/Pa**
- Distortion max. 1.5 dB

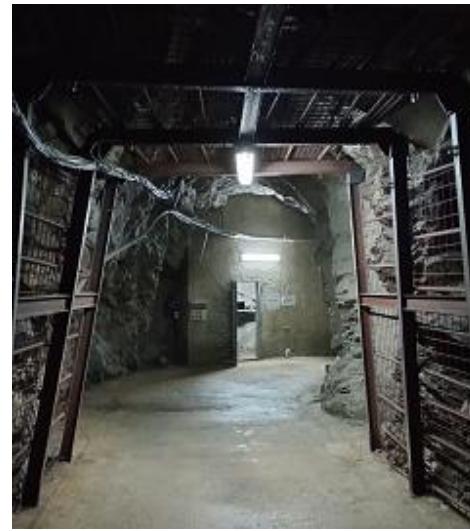

# Improved Infrasound microphones - Astrocent

- Developed by Astrocent team
- Low-cost infrasound microphone ~100 EU
- Frequency range from 0.04 Hz to 120 Hz (AC47 Gras from 0.09 Hz to 20 kHz)
- Sensitivity: 46 mV/Pa
- Distortion max. 1 dB

# Sos Enattos mine

The mine consists of tunnels with caverns

Caverns:

# ST0 - Surface Station

- Autonomus system, power supply from solar panels
- 1x GRAS 47AC 1/2", 1x microphone developed by Astrocent
- data synchronized by GPS, 1 pps signal (1 Hz)

November 2022

+2 years

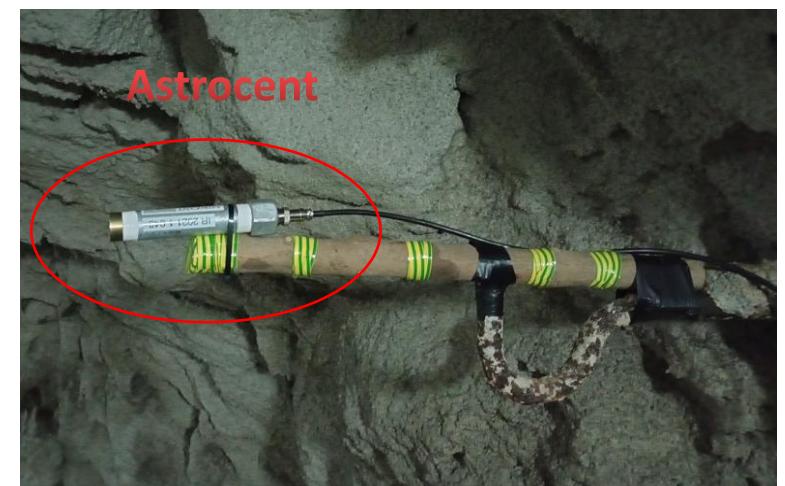

December 2024

# Stations

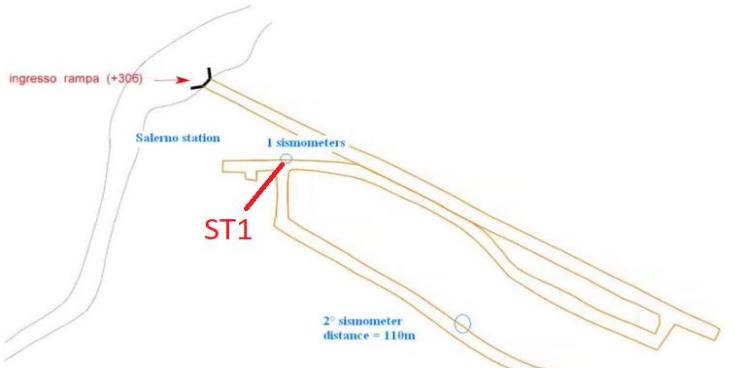

ST1, ST3 - in every station 3x infrasound microphones

- Data synchronized by NTP server via Internet
- 1x Gras + 1x Astrocent microphone (inside the cavern)
- 1x Astrocent (outside the cavern)

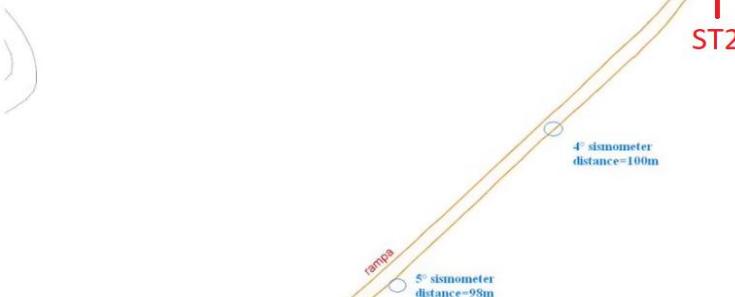

# Sardinia - Sos Enattos Mine

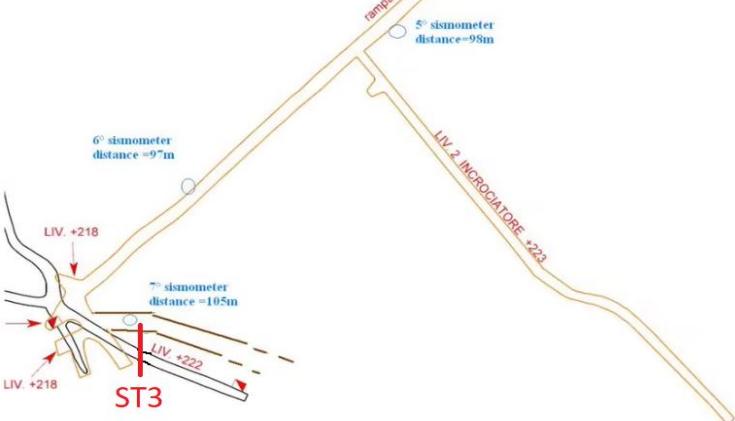

ST1 (300 m)

ST2

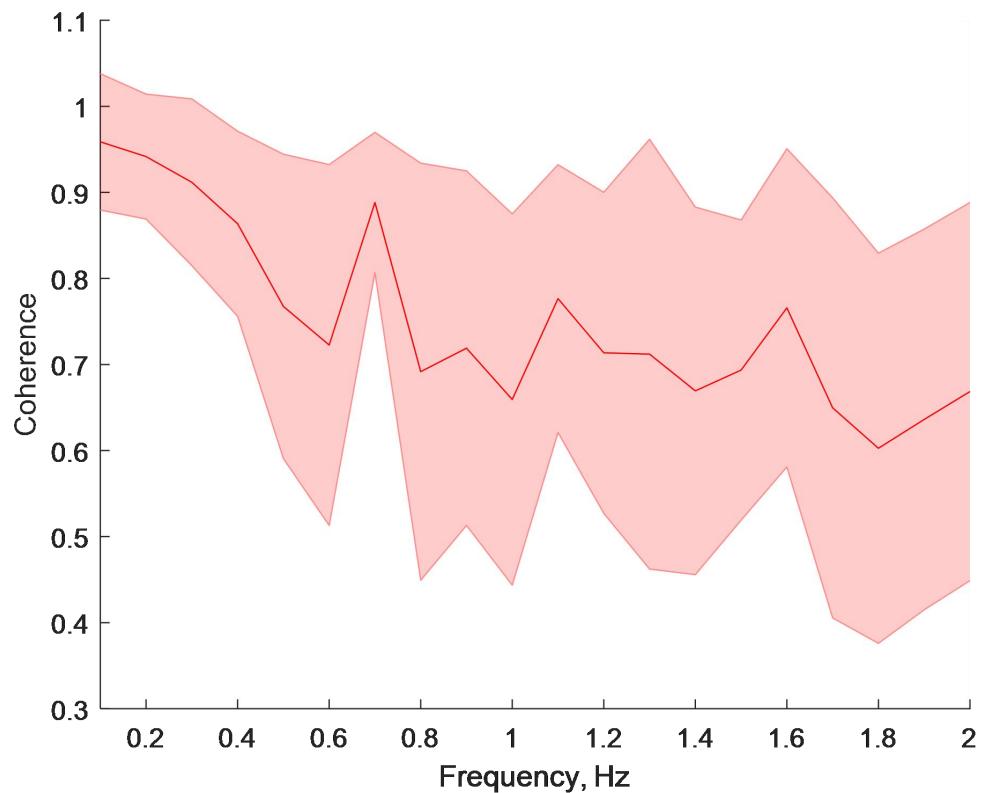

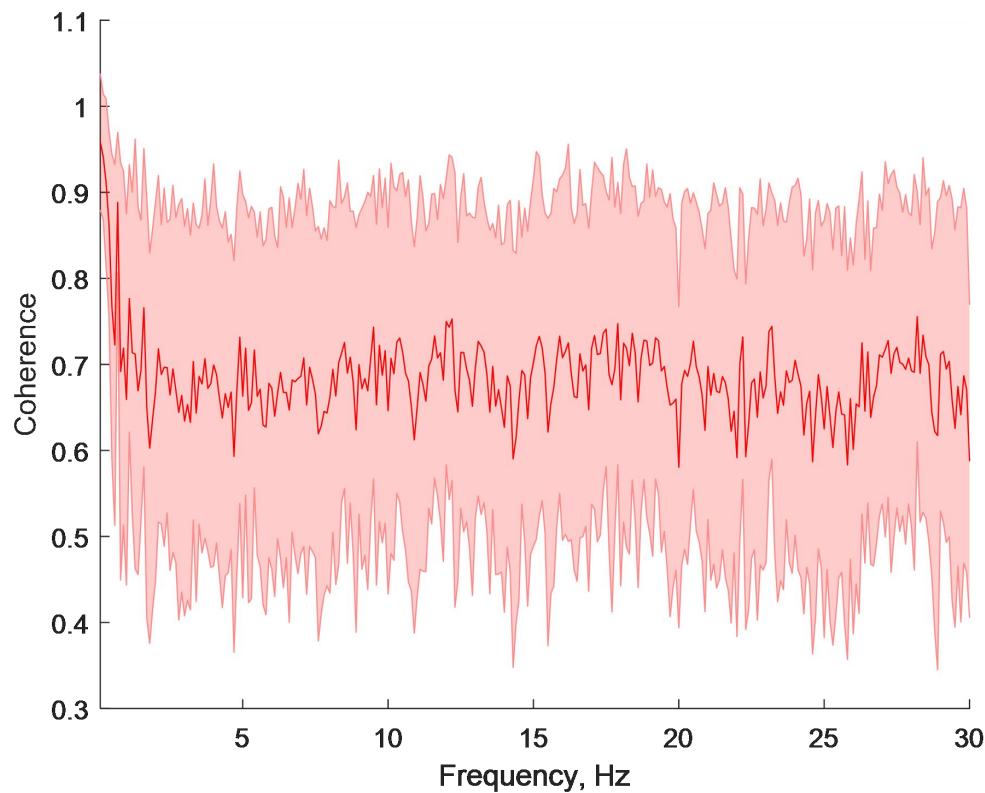

ST3 (222 m)

# Coherence inside the mine ST1 & ST3

ST1 & ST3 Gras 47 AC

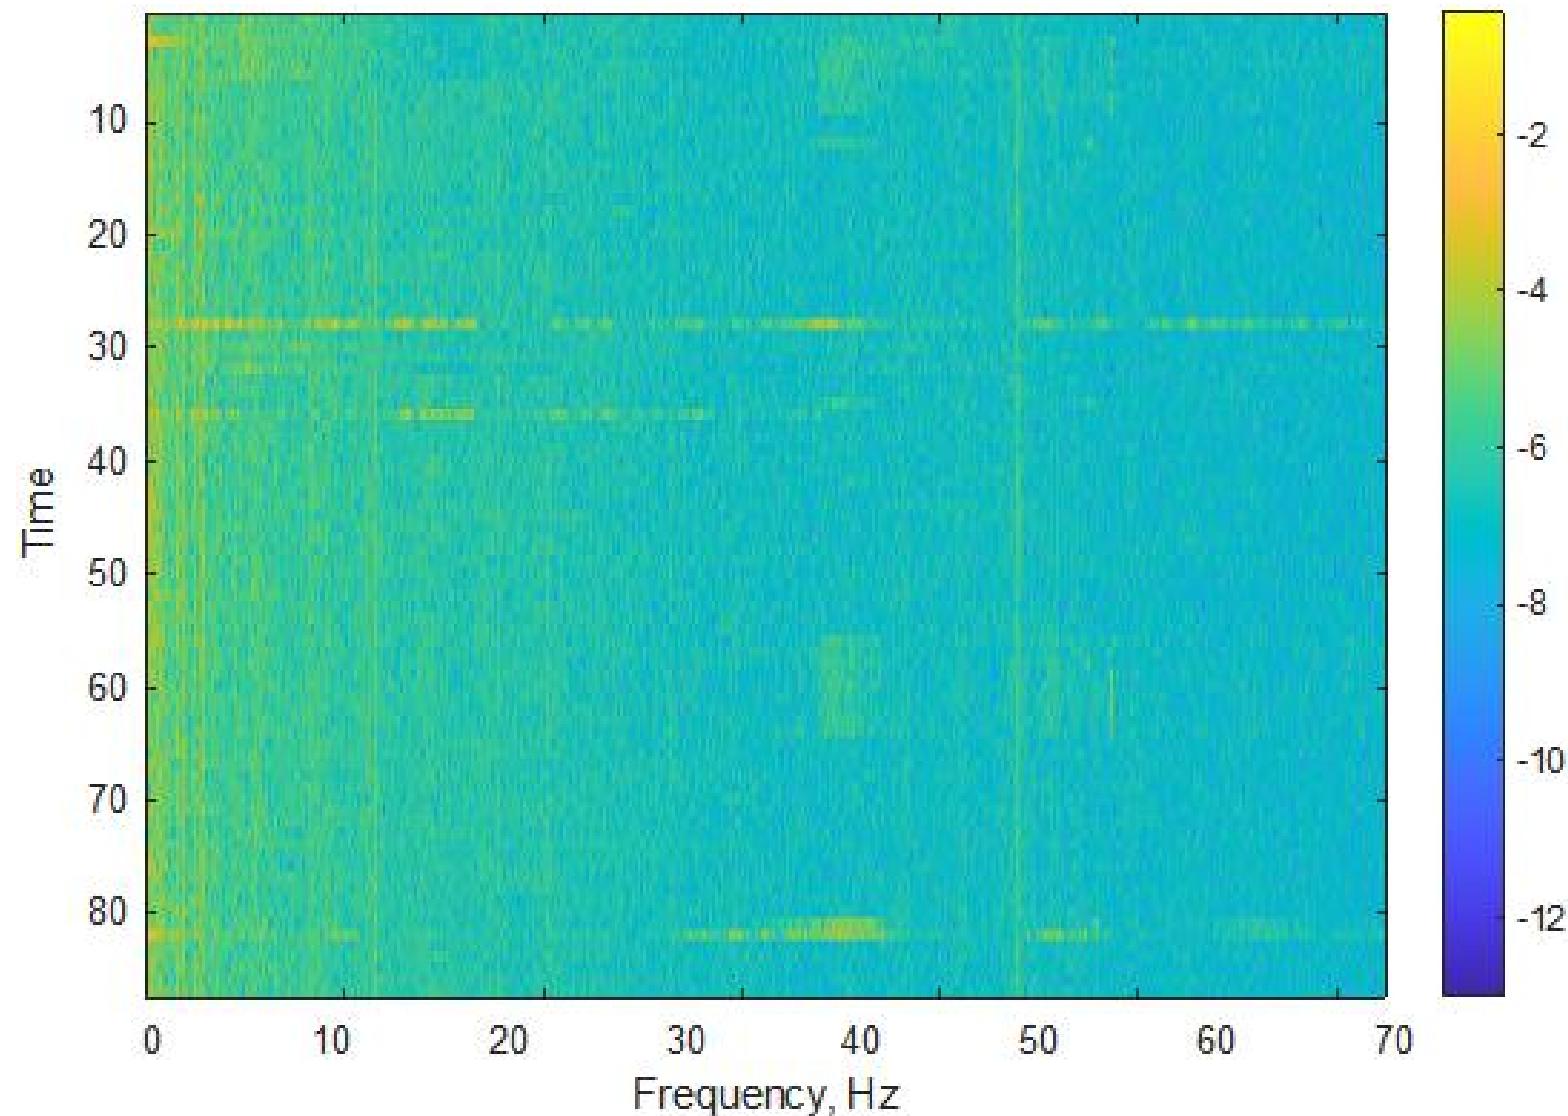

# Coherence ST0 (surface) & ST1/3 (inside)

GRAS 47 AC

# Long-term ST3 (inside mic.)

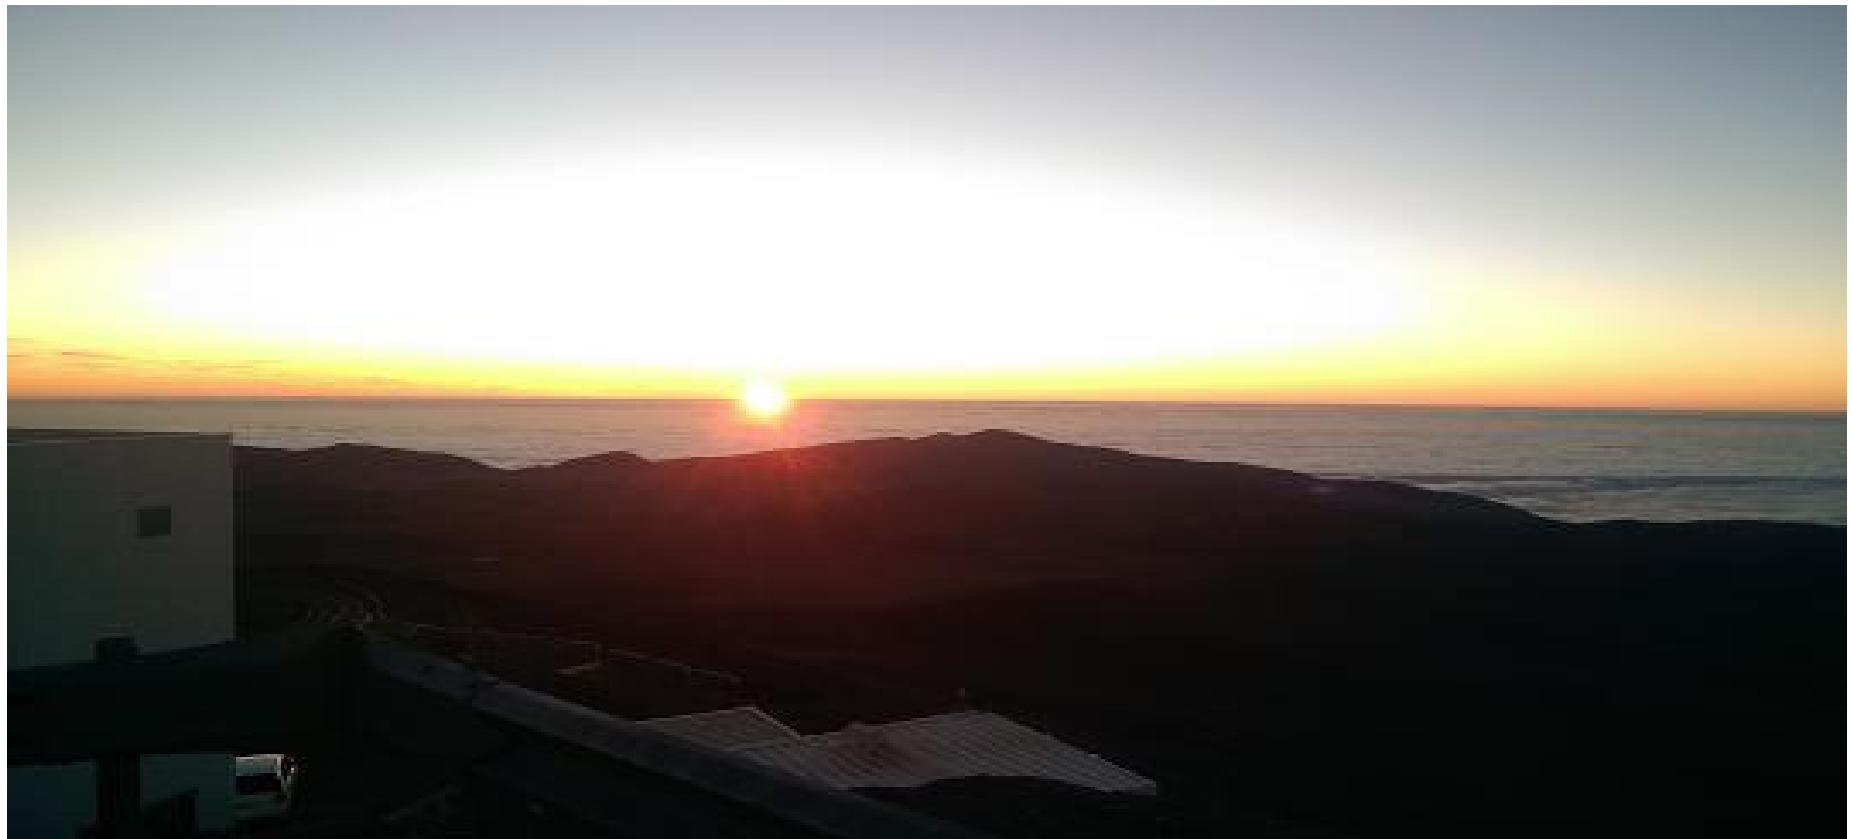

GRAS 47 AC

# Conclusions

- Very high coherence between microphones below 0.6 Hz, inside and out side sensor
- Data from the weather station is also available, we want to study the effect of wind speed on the infrasound signal level
- Sosenattos now 4x infrasound microphones inside the mine, 2 outside

Thank you for your attention
