

Simulations of hungry yet picky black holes [online]

Monday, 5 May 2025 14:15 (15 minutes)

In this talk, I will overview the results of recent simulations of black holes that are hungry, yet picky: they end up ejecting most of the gas they have access to. I will discuss the factors that affect their picky-ness and make the connection to the production of relativistic collimated outflows, or jets.
